

# EzyAppointments Appointment Booking System

Book your Appointment now!!

The screenshot displays the EzyAppointments website. At the top, a navigation bar includes links for Home, About Us, How it's Work, Login, and Contact Us. The main banner features the text "It's Easy to make Appointment's now!" alongside a red alarm clock and a ruler. Below the banner is a row of icons representing various services: Restaurant, Barber, Dentist, Doctor, Engineer, Education, and Cafe. The "Available on" section shows app store links for the App Store and Android Market, each with a placeholder image and text. To the right, a search form includes dropdown menus for City, Categories, and Profession, along with a Search button. The "Welcome to ezyAppointments" section contains a paragraph of Lorem Ipsum text and a group photo of people. The footer, titled "Site Navigation", lists links for Site Map, Privacy policy, Terms & conditions, Career, Our Story, and Our process, along with secondary links for Blog, Home, About us, Our work, Contact us, and Services. A copyright notice for 2015 is also present.

**The Client:**

The client of this application is based in Australia.

**The Problem:**

- Lack of automated services search
- No direct electronic comparison available
- Users rating on personal websites are not always authentic.
- Need to empower the End user

**The Greyhound Analysis:**

- No unified platform.
- New residents often find it difficult to judge the work credentials and quality of service providers.
- Services need to be available on a unified and easy to access database.

**The Greyhound Solution:**

- The client came up with the idea of developing a platform wherein the various service providers can register into the system; enter their professional details and their available schedules.
- These schedules will be available for the users who are looking out to purchase these services.
- The users can book the appointments of these service providers as per their available slots and to achieve this, they would be able to make the payments online for the appointments.
- Once the appointments are confirmed the details would be sent to the users and the service providers via emails and SMS Gateways

Greyhound Technologies Pvt. Ltd addressed the requirements of the client and came up with a solution of developing the application that would run on Android Devices – Phone & Tablet, iOS/iPad and a web application.

- The various service providers can register with the system and enter their details which would be accessed by the various users.
- The users will use the mobile app and also can login from the website and book appointments and also confirm their appointments via emails.
- The Service providers can view the client details their appointments along with payments.
- Appointment rescheduling, cancellation, online payment, push notifications all such features have been covered for the users.
